SKII Series General-Purpose Injection Molding Machine (90T-750T)

The Best Buy

YIZUMI is committed to be a technologically leading supplier of the best cost-effective solution.

Founded in Guangdong, China in 2002, Guangdong Yizumi Precision Machinery Co., Ltd. is a ChiNext-listed company focusing on the fields of polymer molding and metal forming. The company involves in design, R&D, manufacture, sale and service of injection molding machines, die casting machines, rubber injection machines, high-speed packaging systems and automated robotic systems.

Yizumi mainly produces injection molding machine, die casting machine, high speed packaging machine, mold and robot. Also, Yizumi owns many technical services centres and over 40 global distributors, business covers over 70 countries and regions. It has established production bases at home and abroad covering an area of nearly 600,000 square metres, and has over 3,000 employees globally.

In China, Yizumi successively set up three major manufacturing bases in Gaoli, Wusha and Suzhou to comprehensively upgrade its productive capacity. In 2017, Yizumi built manufacturing bases in India and the United States. In addition, Yizumi has established technology service centers, R&D centers and a sales network, implementing the globalized operations strategy.

3.533 billion

The total sales volume of YIZUMI in 2021 exceeded CNY 3.533 billion, up 29.97% year on year, maintaining a steady growth for five consecutive years

70+

60000m² 600000m² of total worldwide manufacturing floor space

3000+ Over 3,000 employees globally

810 million The export sales of YIZUMI totaled CNY 810 million in 2021

+

SKII Series General-Purpose Injection Molding Machine

SKII series not only remains efficient and energy-saving as always, but also makes remarkable progress in stability and customer experience. Continuous optimization endows SKII series with interchangeability of the SK/A5 series platform.

SKII series is positioned as the best buy among small and medium-sized injection molding machines and committed to enhancing the user experience.

Three Core Customer Value Propositions

• Stability

The servo system is stable and reliable and the components quality is optimized. The stability of the whole machine provides customers with newer and better experience in product repeatability, position repeatability and other aspects.

High efficiency

SKII series is characterized by fast plasticization, short dry cycle and high operating efficiency. T-slots are standard on SKII series so that mold change is easier and quicker.

• Comprehensive upgrade of customer experience

Apart from ensuring high stability and efficiency, which are the core value, Yizumi focuses more on enhancing the user experience that covers industrial design, human-machine communication, environmental protection and other details.

Clamping Unit

Reliable, stable, durable

SKII series is based on high-rigidity clamping unit design and comprehensive optimization of parameters and force distribution, ensuring the machine is robust, stable and reliable.

1 Platen center clamping

Both the fixed platen and movable platen are designed with clamping force focused on the center, which minimizes the platen deformation. Uniform pressure distribution to the center of mold during high-pressure mold closing can suppress defects like flash and short shot due to the platen deformation, reduce clamping force and extend the life of mold.

② Combination of T slots and bolt holes

The platen has both T slots and bolt holes in horizontal direction, but only bolt holes in vertical direction. Such layout makes the setup and removal of mold easier and increases the overall rigidity of platen.

③ Optimized ejection mechanism

The ejector stroke is increased and the forced ejector return interface is a standard feature, which meets the needs of different customers.

(4) Enhanced load relief groove design

The optimization of load relief groove makes the force applied to the rod threads more uniform, ensures long service life of the tie rod.

(5) Adjustment-free mechanical safety lock

The adjustment-free safety lock is located at the tail platen for automatic mechanical protection.

6 User-friendly

EUROMAP 18 based robot locating hole is a standard feature that makes setup more convenient and quicker.

Injection Unit

Stable, efficient, high accuracy

Based on optimized injection mechanism design, the injection unit of SKII series has higher rigidity. The design of barrel assembly is enhanced to reduce the frictional resistance during the injection process, increase the injection accuracy and ensure the stability of injection.

1

High-rigidity injection component

3

Movable hopper guide rails(standard feature for 90T-320T)

Centralized lubrication module

① Optimized injection unit

UN260SKII-480SKII machines adopt integrated injection carriage frame design. The optimized design of injection mechanism increases the rigidity, ensures the coaxiality of forces on motion and injection, reduces resistance and improves the stability and accuracy of injection.

② Optimized screw design

The plasticizing efficiency and quality are enhanced to meet customer needs for fast plasticization, good color mixing and easy cleaning.

③ User-friendly design

Standard features, including movable hopper guide rails, barrel cover, purge guard and centralized lubrication add to the convenience of operation and maintenance and raises the overall efficiency for customers.

Hydraulic System

Yizumi third-generation energy-saving servo technology: efficient combination of technology and configuration makes the best servo machine

The third-generation energy-saving servo system has low moment of inertia and consumes less energy. The whole hydraulic circuit is subject to optimizations, including the reduction of resistance to motion and pressure loss, to ensure less energy consumption of the machine.

Professional servo motor

High-performance gear pump

INOVANCE servo drive

1 Strong power

The power system is well configured with strong overloadcapacity. For example, a 120T machine can raise no overloadalarm at maximum speed and pressure for 5 minutes in a test.

③ Optimized oil cooler design

UN90-320SKII machines are equipped with built-in diaphragm type oil cooler and they have good look, compact structure and higher cooling efficiency.

2 Fast response

The response speed becomes faster. Take a 120T machine for example, the servo system can respond in about 40ms.

(4) Improved hydraulic line layout

The steel pipes are well arranged and the hydraulic hoses are organized in the machine frame so that the machine looks neat and simple.

Electrical Control System

MH9118 controller: fast speed, accurate control, easy operation, program for multiple processes, powerful

- MH9118 controller which runs fast and clock rate up to 140MHZ
- 8"TFT 256-color LCD with independent CPU control
- Machine control frequency of 140MHZ, scanning time of 1ms, fast response and accurate control
- 100 sets of molding data storage with USB port
- Production quality control with main process parameter statistics
- Automatic tuning of PID settings for barrel temperature control

(2) The universal and standardized design of various electrical interfaces meets diversified customer needs.

Various optional interfaces (for 200T and smaller machines)

Injection units can be equipped with linear guide rails and smaller injection units are available to meet individual customer needs.

③ Integrated high-rigidity machine frame

The electrical enclosure and machine frame are designed as a whole to increase rigidity and save space.

UN630~750SKII-V Specifications (Variable displacement pump)

DESCRIPTION	UNIT		UN630SKII-V UN750SKII-V										
International size			42	200			56	60					
				INJECTI	ΟΝ UNIT								
Shot volume	cm ³	2211.7	2438.4	2924.9	3455.7	2604.6	3124.4	3691.4	4305.6				
Shot weight (PS)	g	2034.7	2243.3	2691.0	3179.3	2396.3	2874.4	3396.1	3961.2				
Screw diameter	mm	80	84	92	100	84	92	100	108				
Injection pressure	MPa	190	173	144	122	218	181	154	132				
Injection rate	g/s	439	484	581	686	520	624	737	860				
Screw L:D ratio		23.2:1	22:1	21.7:1	20:1	21.9:1	22:1	21.6:1	20:1				
Max. injection speed	mm/s		9	5			10	02					
Screw stroke	mm		44	40			4	70					
Screw speed	r/min		0-1	133			0-1	L43					
				CLAMPI	NG UNIT								
Clamping force	kN	6300 7500						00					
Opening stroke	mm		90	00			98	80					
Space between tie bars (W×H)	mm×mm		880)	x880			980	x960					
Max. daylight	mm		18	00			1960						
Mold thickness (minmax.)	mm		400	-900			400-980						
Ejector stroke	mm		28	30		280							
Number of ejector pin holes			2	1		21							
Ejector force	kN		18	32		182							
				POWE	RUNIT								
Max. system pressure	MPa		17	7.5			17	7.5					
Oil pump motor	kW		37+	18.5			37-	+37					
Heating capacity	kW		34,	/38			41.2	2/45					
Number of temperature control zones		7						7					
		GENERAL											
Dry cycle time	S		4	.9		5.3							
Oil tank capacity	L		7:	10			72	20					
Machine dimensions (LxWxH)	m×m×m		9.06×2.	15×2.26			9.66×2.	34×2.37					
Machine weight	kg			/				/	/

Features

	Standard	Optional
Injection unit		
Nitrided screw & barrel	•	
Double-cylinder injection device	•	
Movable hopper (90T-320T)	•	
Screw cold start protection	•	
Automatic purging	•	
Selectable suck-back before or after plasticizing	•	
4 to 7-stage PID barrel temperature control	•	
Automatic injection and plasticizing failure detection	•	
Precision injection transducer	•	
6-stage injection speed/pressure/position control	•	
5-stage holding speed/pressure/time control	•	
3-stage plasticizing speed/pressure/position control	•	
Extended nozzle		0
Hard chromeplated screw component		0
Bi-metallic screw component Screw component for special applications		0
Hopper dryer		0
CNC propotional back pressure		0
Barrel blowing device		0
Purge guard (with safety switch)		0
Spring shut-off nozzle		0
Extended injection stroke		0
Clamping unit		
Precision transducer for clamp/ejector stroke control	•	
	•	
Precision transducer for clamp/ejector stroke control	•	
Precision transducer for clamp/ejector stroke control Three platens and toggles made of QT500-7A ductile cast iron	•	
Precision transducer for clamp/ejector stroke control Three platens and toggles made of QT500-7A ductile cast iron 2-stage ejector forward/backward control	• • •	
Precision transducer for clamp/ejector stroke control Three platens and toggles made of QT500-7A ductile cast iron 2-stage ejector forward/backward control Low-pressure mold protection	• • • •	
Precision transducer for clamp/ejector stroke control Three platens and toggles made of QT500-7A ductile cast iron 2-stage ejector forward/backward control Low-pressure mold protection Various ejection settings	• • • • •	
Precision transducer for clamp/ejector stroke control Three platens and toggles made of QT500-7A ductile cast iron 2-stage ejector forward/backward control Low-pressure mold protection Various ejection settings Hydraulic mold height adjusting device	• • • • •	
Precision transducer for clamp/ejector stroke control Three platens and toggles made of QT500-7A ductile cast iron 2-stage ejector forward/backward control Low-pressure mold protection Various ejection settings Hydraulic mold height adjusting device Mechanical and electrical safety devices Wear-resistant movable platen supporting tracks High-rigidity platen with T slots and bolt holes	• • • • • • • • •	
Precision transducer for clamp/ejector stroke control Three platens and toggles made of QT500-7A ductile cast iron 2-stage ejector forward/backward control Low-pressure mold protection Various ejection settings Hydraulic mold height adjusting device Mechanical and electrical safety devices Wear-resistant movable platen supporting tracks High-rigidity platen with T slots and bolt holes Automatic centralized lubrication system		
Precision transducer for clamp/ejector stroke control Three platens and toggles made of QT500-7A ductile cast iron 2-stage ejector forward/backward control Low-pressure mold protection Various ejection settings Hydraulic mold height adjusting device Mechanical and electrical safety devices Wear-resistant movable platen supporting tracks High-rigidity platen with T slots and bolt holes Automatic centralized lubrication system Euromap-based robot locating hole		
Precision transducer for clamp/ejector stroke control Three platens and toggles made of QT500-7A ductile cast iron 2-stage ejector forward/backward control Low-pressure mold protection Various ejection settings Hydraulic mold height adjusting device Mechanical and electrical safety devices Wear-resistant movable platen supporting tracks High-rigidity platen with T slots and bolt holes Automatic centralized lubrication system Euromap-based robot locating hole Increased mold thickness		
Precision transducer for clamp/ejector stroke control Three platens and toggles made of QT500-7A ductile cast iron 2-stage ejector forward/backward control Low-pressure mold protection Various ejection settings Hydraulic mold height adjusting device Mechanical and electrical safety devices Wear-resistant movable platen supporting tracks High-rigidity platen with T slots and bolt holes Automatic centralized lubrication system Euromap-based robot locating hole Increased mold thickness Larger ejector stroke		0
Precision transducer for clamp/ejector stroke control Three platens and toggles made of QT500-7A ductile cast iron 2-stage ejector forward/backward control Low-pressure mold protection Various ejection settings Hydraulic mold height adjusting device Mechanical and electrical safety devices Wear-resistant movable platen supporting tracks High-rigidity platen with T slots and bolt holes Automatic centralized lubrication system Euromap-based robot locating hole Increased mold thickness Larger ejector stroke Mold lifting device		0
Precision transducer for clamp/ejector stroke control Three platens and toggles made of QT500-7A ductile cast iron 2-stage ejector forward/backward control Low-pressure mold protection Various ejection settings Hydraulic mold height adjusting device Mechanical and electrical safety devices Wear-resistant movable platen supporting tracks High-rigidity platen with T slots and bolt holes Automatic centralized lubrication system Euromap-based robot locating hole Increased mold thickness Larger ejector stroke Mold lifting device Mold thermal insulation plate		0
Precision transducer for clamp/ejector stroke control Three platens and toggles made of QT500-7A ductile cast iron 2-stage ejector forward/backward control Low-pressure mold protection Various ejection settings Hydraulic mold height adjusting device Mechanical and electrical safety devices Wear-resistant movable platen supporting tracks High-rigidity platen with T slots and bolt holes Automatic centralized lubrication system Euromap-based robot locating hole Increased mold thickness Larger ejector stroke Mold lifting device Mold thermal insulation plate Special mold mounting hole		
Precision transducer for clamp/ejector stroke control Three platens and toggles made of QT500-7A ductile cast iron 2-stage ejector forward/backward control Low-pressure mold protection Various ejection settings Hydraulic mold height adjusting device Mechanical and electrical safety devices Wear-resistant movable platen supporting tracks High-rigidity platen with T slots and bolt holes Automatic centralized lubrication system Euromap-based robot locating hole Increased mold thickness Larger ejector stroke Mold lifting device Mold thermal insulation plate Special mold mounting hole Automatic safety door		0
Precision transducer for clamp/ejector stroke control Three platens and toggles made of QT500-7A ductile cast iron 2-stage ejector forward/backward control Low-pressure mold protection Various ejection settings Hydraulic mold height adjusting device Mechanical and electrical safety devices Wear-resistant movable platen supporting tracks High-rigidity platen with T slots and bolt holes Automatic centralized lubrication system Euromap-based robot locating hole Increased mold thickness Larger ejector stroke Mold lifting device Mold thermal insulation plate Special mold mounting hole Automatic safety door Hydraulic system		
Precision transducer for clamp/ejector stroke control Three platens and toggles made of QT500-7A ductile cast iron 2-stage ejector forward/backward control Low-pressure mold protection Various ejection settings Hydraulic mold height adjusting device Mechanical and electrical safety devices Wear-resistant movable platen supporting tracks High-rigidity platen with T slots and bolt holes Automatic centralized lubrication system Euromap-based robot locating hole Increased mold thickness Larger ejector stroke Mold lifting device Mold thermal insulation plate Special mold mounting hole Automatic safety door		
Precision transducer for clamp/ejector stroke control Three platens and toggles made of QT500-7A ductile cast iron 2-stage ejector forward/backward control Low-pressure mold protection Various ejection settings Hydraulic mold height adjusting device Mechanical and electrical safety devices Wear-resistant movable platen supporting tracks High-rigidity platen with T slots and bolt holes Automatic centralized lubrication system Euromap-based robot locating hole Increased mold thickness Larger ejector stroke Mold lifting device Mold thermal insulation plate Special mold mounting hole Automatic safety door Hydraulic system Third-generation servo system		
Precision transducer for clamp/ejector stroke control Three platens and toggles made of QT500-7A ductile cast iron 2-stage ejector forward/backward control Low-pressure mold protection Various ejection settings Hydraulic mold height adjusting device Mechanical and electrical safety devices Wear-resistant movable platen supporting tracks High-rigidity platen with T slots and bolt holes Automatic centralized lubrication system Euromap-based robot locating hole Increased mold thickness Larger ejector stroke Mold lifting device Mold thermal insulation plate Special mold mounting hole Automatic safety door Hydraulic system Third-generation servo system		

	Standard	Optior
High-performance hydraulic valve	•	
Imported sealing components	•	
Lower-noise hydraulic system	•	
Hydraulic oil cooler	•	
Hydraulic oil temperature detection and alarm		0
Hydraulic core-pull/ unscrewing device		0
Hydraulic satety protection		0
Independent oil temperature control		0
High-response servo injection system with accumulator		0
High-response servo mold open/close system		0
Ejection during mold opening		0
Enlarged oil cooler		0
Enlarged oil pump and motor		0
Nitrogen assisted injection device		0
Control system		0
Input/output inspection function		
Automatic heat preservation and automatic		
heating setting Time / position / time + position controlled switchover from injection to holding		
Separate adjustment of action slope		
Control program of two sets of core puller/ unscrewing	•	
Process parameter lock	•	
Automatic clamping force adjustment	•	
8" color LCD	•	
120 sets of molding data storage	•	
Multiple operating languages	•	
Robot interface One set of single-phase power socket/Two sets of	•	
3-phase power socket (16A/32A+16A)	•	
Emergency stop buttons for front and rear safety doors	•	
Electrical unscrewing device		0
Hot runner interface		0
Air-assisted injection device		0
Working light / one or multi-color alarm light		0
Air blast		0
Electric unscrewing interface		0
Power supply voltage change		0
Others		
Operation manual	•	
Adjustable leveling pad	•	
Tool kit	•	
Filter element	•	
Mold retaining plate	•	
General hopper		0
Mold temperature controller		0
Autoloader		0
Dehumidifier		0
Glass tube flowmeter		0

YFO:6 Premium Services

Training and customers

YIZUMI e-service

Telephone follow-up

Setting up customer files and providing consulting and guidance services

Door-to-door service

Regular on-site nspection by service engineers, providing preventative maintenance

Spare part service

Convenient spare part supply network, quick and accurate delivery

Focused training for professionals
